Amendments to the Specification:

Please replace paragraph [0008] with the following amended paragraph:

[0008] Figures 5A-C 5A-5C are diagrams illustrating different examples of interactions with a computer system equipped with a movement sensor, in accordance with one embodiment.

Please replace paragraph [0023] with the following amended paragraph: [0023] Figures 5A-C 5A-5C are diagrams illustrating different examples of interactions with a computer system equipped with a movement sensor, in accordance with one embodiment. For one embodiment, in addition to having a movement sensor 205, computer system 500 may include an upper section (not shown) and a lower section (not shown). The display may be part of the upper section. The bottom side of the computer system 500 may be part of the lower section. For one embodiment, when a pressure is applied to the upper section, the upper section may move slightly toward the lower section. The upper section may then move back to its normal default position when the pressure is removed. This type of movement may be referred to as a clicking motion.

Please replace paragraph [0024] with the following amended paragraph: [0024] For one embodiment, depending on where the pressure is applied to the upper section, the computer system 500 may perform different operations. For example, when a pressure is applied such that the upper section is almost evenly displaced toward the lower section, a first mouse click may be recognized by the computer system 500 and corresponding actions may be performed. The same mouse click may be recognized when the pressure 505 is applied toward the middle of the upper section (Figure 5A). When the pressure 510 is applied toward the right side of the upper section (Figure 5B),
